

Task

input, goal and
assessable outcome

e.g. triage of incoming emails

*to implement
in an agentic system*

Software architect

*decides
based on the
recommendation*

*describes
the task, constraints
and priorities*

*recommends an
orchestration paradigm
with its basis and
implementation guidance*

TADF

Task-Level Architecture Decision Framework

Evidence-based decision rules

LLM workflow

Code controls the task progression

or

Agent

The **model** controls the task progression
